

Dependency Failure Drill

GFD-2026-04 | degraded-mode expectations

Pinecone

When vector search is unavailable, ordinary text drawing stays available but material retrieval enters an explicit degraded state. The system must not claim that no evidence exists.

Object storage

When hydration fails, editing saved XML stays available but opening evidence is blocked. Partial grounded answers are not published.

对象存储与视觉

对象存储故障时可编辑已保存的画布但不能打开证据；视觉验证待定时可给出文本结论但不得确认像素关系。

Canvas save

When canvas save is blocked, the user may download a draft but publishing is disabled. A save failure is treated as the highest severity.

Drill id

The dependency failure drill identifier is GFD-2026-04.
