

# Access Scope Cases A

GAZ2-2026-11 | cross-user gates

## Foreign workspace

A request from a foreign workspace cannot read material that was never shared with the acting user. The standard id is GAZ2-2026-11.

## Cached citation

A visible cached citation does not grant the acting user access to the underlying material.

## Named id

Naming another owner's private material identifier does not grant read access; ownership is checked before evidence enters the prompt.

## 跨用户

任何请求都不能检索到其他用户上传的资料;系统永远按当前用户评估。

## Screenshot

Re-importing another user's screenshot does not restore access to their material.

# Access Scope Cases B

removal and expiry

## Removed share

When a share is removed, new retrieval cannot use that material even if an old canvas still shows its citation label.

## Expired invite

An expired invite does not authorize new retrieval; the acting user is treated as unauthorized.

## Temporary reviewer

A temporary reviewer appointment grants review rights only and does not grant access to unrelated materials.

## 越权尝试

无权用户请求受保护内容时,系统必须拒绝并说明无权限,而不是返回缓存内容。

## Downgrade

Losing edit rights also removes the ability to hydrate protected evidence for new requests.
