

Access Scope Cases E

GAZ4-2026-19 | evidence-path gates

Hydration gate

Evidence hydration is authorized per acting user; a shared citation cannot hydrate protected bytes for an unauthorized viewer. Id GAZ4-2026-19.

Group node

A group node's citation list must not include material the acting user cannot access.

Search filter

The tenant and chartbook filters are applied at query time, not after ranking.

越权检索

越权检索请求必须在进入排序前被过滤,而不是排序后再移除。

Fallback source

A policy fallback source is still bounded by the acting user's authorization.

Access Scope Cases F

records and edges

Deleted material

Deleted material cannot be retrieved even if a cached vector remains; deletion is honored first.

Shared chartbook

A shared chartbook exposes material only when an active share grants the acting user access.

审计留痕

每次授权决策都记录当前用户与被评估范围,便于事后核查。

Cross-tenant cache

A cached result from another tenant is never used as a recovery shortcut.

Minimal disclosure

An answer discloses only material within the acting user's authorized scope.
