

DRAW.IO PLANNING WORKSHOP

DPW-2026-33 | scanned design notes

Goal

The workshop defined how a material-backed request becomes an editable diagram. The workshop identifier is DPW-2026-33; DPW-2026-03 is a room booking.

Scope

Participants covered source selection, evidence grouping, layout choice and citation review. No production credentials or customer data were used.

Decision

The canonical deliverable is editable draw.io XML, not a screenshot.

1. REQUEST TRIAGE

scan of retrieval-decision notes

Layout only

Moving existing shapes or changing colors does not require retrieval when no factual label changes.

Material fact

Adding a new fact, numeric comparison or source-backed relationship requires retrieval and evidence validation.

Clarify

If a pronoun could refer to two diagrams, ask the user before searching.

2. SOURCE ORDER

explicit source and chartbook scope

Order

Use an explicit source first, then current-chartbook material, then broader allowed material when automatic selection is enabled.

Removed material

A removed share cannot be used for a new request even when an old canvas still displays its citation label.

No result

Index failure is DEGRADED SEARCH, not NO EVIDENCE.

3. EVIDENCE BOARD

scanned thresholds and owners

Budgets

Candidate retrieval: 40 | Hydration: 16 | Final bundle: 8

Completeness

Comparison questions keep ALL required evidence parts. One matching page is incomplete when the answer spans two pages.

Owner

The Trust reviewer resolves unsupported citation findings.

4. CANVAS REVIEW

visual and editable-output checks

Visual

Arrow direction, containment and raster table cells require pixel verification.

Editable

Stable cell identifiers and valid draw.io XML are required before completion.

Export

PNG is a preview. It does not preserve semantic groups or evidence bindings.

5. WORKSHOP ACTIONS

dates, roles and negative evidence

Deadline

The typed-plan validation checklist is due on 14 January 2027. The 10 January date is a template-review meeting.

Approval

The Agent UX Lead approves the checklist; the workshop facilitator records comments.

Unsupported

No password, user phone number, tenant key or production endpoint appears in these notes.
